ONLINE BOOK STORE

ABSTRACT :

The Online Book Store is a web-based application designed to provide users with a convenient platform for browsing, searching, and purchasing books online. The main objective of the system is to simplify the process of finding and buying books by providing book information in a single, user-friendly platform. The application allows users to browse books based on categories, authors, genres, and other relevant classifications. Each book provides important details such as the book title, author name, description, category, price, and availability.

The system provides features such as book searching, category-based browsing, book details, shopping cart, and online ordering. Users can easily search for their desired books, view their details, add books to the cart, and place orders. The application is designed with a simple and responsive interface to provide a smooth user experience. The system can be developed using HTML, CSS, and JavaScript, with appropriate data structures for storing and managing book information. HTML is used to structure the webpages, CSS is used to create an attractive and responsive interface, and JavaScript is used to implement interactive features such as searching, filtering, cart management, and navigation.

The proposed Online Book Store helps users save time and effort by providing an easy way to discover and purchase books from anywhere. By organizing book information and providing essential online shopping features, the system aims to improve accessibility, convenience, and efficiency in the process of buying books online.
